

Inspiring – TFL Colour Trends

» Spring-Summer 2026

TFL – Great chemicals. Excellent advice.

Wearing

Flower maidens on a boat off a shoreline awash in the light of summer that explodes in a myriad of luminous points, illuminating their faces. This image is the almost unparalleled expression of sentimentality by the painter Caspar David Friedrich that most elegantly introduces a return to feelings in collections, and to the need for tenderness in fashion and in private life, on the heels of a decade of unrelenting social media and information.

Neutral shades, beiges and grays return to leather in general, from the most sophisticated kidskin to the ethereal appeal of nappa sprayed with new acrylic polymers, and even nubuck, the trend setter for the next summer season, whose fresh color palette also includes water-repellent versions that combine beauty and functionality.

The approach to a plant-based world is improved and made more concrete through greater reliance on new ingredients, such as Tanigan® PURE TA, a new plant-based tanning agent made from renewable sources that endows materials with cleanliness, compactness and softness.

Full-grain leathers see a forceful return to the 3D theme, enhanced with removable finishes that are brushed or buffed in the tanneries, offering the market ready-to-use materials. The most rewarding tone is earth, a throwback to cosmetics from the 1980s, that acts to lighten the grain of the leather in warm shades ranging from gold to a sumptuous ochre.

The slicked back hair and highlights of celebrities like Maneskin or Duran Duran from the 1980s provide the inspiration for pearly and metallic finishes antiqued with contrasting waxes, glossy wet coatings and glitter varnish.

Bright shades dominate the mood in the unlined tassels for apparel and in the tumbled leather for large, fringed bags, just as the suede splits are brightened with the warm and intense chromatic tones used for “Electrique” sneakers.

The washed-leather look is still very much alive, both in the full-grain versions and in nubuck surfaces; an upgrade is offered by slightly wrinkled prints, by low-key two-tone effects produced by transparent pigments bonded with polyurethanes and impalpable waxes, and by touch and scent sensations that recall laundry hung out by housewives.

THEMES:

- Grey Stone
- Submariner Landscape
- Brilliant Bow-Tie
- Golden Atmosphere

TARGET:

- Hiking back-pack multipocketed with long shrunked calf straps.
- Un-lined soft washed lambskin safari slim jacket, accessorized with soft full-vegetal calf belt.
- Lace-up loafers with double tone leather laces and finished with carnauba wax on front upper side.

It takes talent to combine creativity and proper perspective to see far into the future and bring life to the world of leather goods in the home furnishing and automotive sectors. The ability to gather all these input streams and blend them perfectly in terms of performance is necessary to place both the natural and the artificial world side by side in a functional and sustainable perspective.

Innovation in the tanning world begins during the processing and the benefits are seen from the use of new tannins without bisphenols (see the Tanigan® family) and reducing the use of mineral oils by selecting new acrylic polymers (see Levotan®), and thin and tenacious resins such as Retingan®.

The blending of these substances helps unlock the secret of “comfort”, an essential characteristic for any home furnishing system.

The voice of Mother Earth provides the creative lifeblood for the world of plant-based retanning. Global players in the home furnishing sector see large profits arising from the propensity to use sometimes even non-uniform natural leathers, whose genuine characteristics make it possible for manufacturers to branch out into innovative technical and cosmetic solutions.

The great outdoors is the main theme of every collection, thanks to a desire to live in the open air even in cities and the amount of greenery that is now part of all new projects and renovations. It is an ambitious challenge for the tanning world given the tests to which the leather is subjected: light, rubbing, wear and tear, etc.

The propensity to live well, which for many people includes a healthy diet and personal well-being, influences architects and interior designers to choose leathers that are extremely soft to the touch and have neutral shades, “slow-washing” aspects for macro seats and pouffes in all shapes, with dollaro and deerskin grains used for tumbled surfaces with the injection of waxes and silicones (see the Roda® Feel family), where they take on an impalpable quality.

Homes are being designed to integrate nature and technology with ample space for stylized and functional benches and chairs covered with splits impregnated with polyurethane compounds (see the Roda® Reco-based family), producing both a flat and rugged look that is visually appealing. More expensive homes and hotel lobbies will see the use of plant-based tanned cowhide (see the new Tanigan® PURE TA and Sellatan® TMC), along with anti-soiling solutions to ensure a completely exclusive interior design feel.

THEMES:

→ Egyptian Elixir

→ Cherry Blossom

🔴 Egyptian Elixir

TARGET:

- Water-repellent nubuk over-sized pillows, laser engraved and filled with goose down.
- Rush matting in pull-up full-chrome cow leather, hand-woven by hand for outdoor use.
- Natural beech armchair with seat and back in impregnated chrome-split slats, finished with glossy matt burnished effect.
